Countdown to saving your energy

Designing the most energy efficient compressed air systems that make a real difference to your business.

The partnership that we have created with our authorised distributor network allows us to focus on our customers exacting requirements by delivering excellence in all areas involving the analysis, design and engineering of the finest compressed air systems. We take the quality of the services that we offer very seriously. As a world leading manufacturer we understand that producing high quality, reliable and efficient products is just the beginning of a long term partnership with our customers.

Our '**Approved Energy Expert**' status is awarded to distributors who are at the forefront of the compressed air industry. This means that their expertise, training and support facilities have been thoroughly developed and then monitored to ensure that our customers benefit from highly qualified and professional advise, design and installation facilities. In addition our '**Approved Energy Experts**' are equipped with the latest monitoring and analysis equipment that allows them to accurately audit any system and to then provide a comprehensive report, demonstrating potential energy savings, accurately and reliably. Of course there are many ways that modern business can reduce energy costs, especially with compressed air, so our '**Approved Energy Experts**' are qualified in areas such as heat recovery, control devises, air treatment and disposal, and new generation network systems. We are sure that the investment that we make in training and development has produced a unique and valuable set of benefits for all of our customers.
